### **See the possibilities • Meet the professionals • Green made easy**

Get answers on how to build more sustainably, with an eye towards resilience, at the [Rebuild Green Expo](#) at the Santa Rosa Veterans Memorial Building on February 22, 2019. It's FREE to the public!

Back by popular demand from 2018, the Expo is a showcase for all aspects of how to build homes that are healthy for people and the planet. The Expo will feature information for everyone, from homeowners seeking clarity about what green building is, to professionals looking to learn about the nuts and bolts. The Expo will bust popular green building myths, demonstrating how green building can be affordable, accessible, and practical. In addition to the exhibition hall, where scores of professionals and green businesses will be on hand to show and tell, throughout the day experts on all aspects of building green will offer education sessions designed for homeowners and building industry professionals.

"The Expo is all about showing that green building does not have to be expensive or difficult to achieve," says architect Alima Silverman, one of the Expo organizers. "We bring real-life, proven solutions that anybody can implement. It's a one-stop shop for healthy, low-carbon home information. In Northern California we are blessed with having many of the world's green building experts and professionals who are looking forward to helping those in the rebuilding communities."

There will be exhibits and talks about energy efficiency, renewable energy, and energy storage; healthy interiors; construction materials and methods; heating and cooling systems; fire-resistant landscaping, water efficiency and reuse; all-electric and zero-energy home advantages, and much more!

#### **Why build green?**

"The question really is, why would anybody NOT build green?" adds Ted Tiffany, Guttman & Blaevoet Engineers. "Who wouldn't want a more efficient and healthier home that is more resilient to disasters and costs less to operate? We're here to prove that it is not an elite niche, it's real and affordable and much easier than you might think. We hope everyone who is rebuilding will come to the Expo to learn about these great solutions."

Exhibitors are encouraged to submit applications now at the [Expo website](#). The Expo is a collaborative project of the [Ecological Building Network](#), the [American Institute of Architects -- Redwood Empire](#), and the [U.S. Green Building Council -- Redwood Empire Chapter](#), along with a host of other dedicated volunteers.
